

PRESSURE. AND HOW TO DEAL WITH IT.

A BRIEF SUMMARY ON US, OUR PRODUCTS & WHY YOU NEED US.

Some numbers to start with with

100 EMPLOYEES

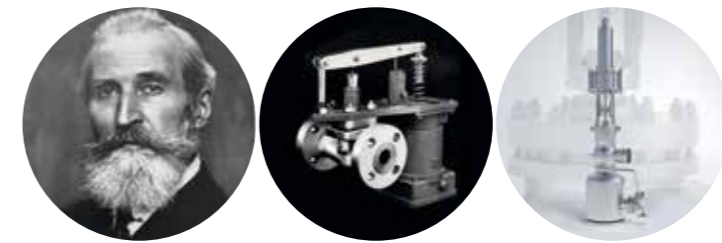

11 SALES ENGINEERS,

13 DEVELOPMENT ENGINEERS,

2.591 ORDERS AND

1.600.000 FLIGHT MILES A YEAR.

The story of our valves

**IT'S BEEN A LONG WAY TO HI-TECH INDUSTRIAL VALVES.
BUT SOME THINGS HAVE NEVER CHANGED.**

As we're calling this little brochure a „brief summary“, let's keep things quick and easy for now: From the early inventions and products back in 1889 to over 10.000 worldwide projects nowadays, there are four simple things we're always keeping in mind: flexibility, innovativeness, quality and trustworthiness. Because we know: In our business, the pressure inside our valves isn't the only one to cope with.

There's more to our business than designing and manufacturing valves. Our first goal is producing satisfied customers. And this process begins earlier and ends way after the production and delivery of the final product.

To begin with: We believe that constant research is fundamental to face future challenges. That is why we maintain our own test centre, certified by the German Association for Technical Inspection (TÜV). And it lead us to offer highly customised valves up to several meters in dimension for media with temperatures over 600°C that can control pressures of up to 700 bar.

To move with the times is not our standard – we try to be ahead. And save your time and money through rapid prototyping. When needed, we deliver a fully functional three dimensional prototype of your valve.

We know that we are working for branches where it is crucial to meet the highest requirements and quality standards where failures may result in massive costs and perhaps the loss of human lives. Even today, a power plant in Germany uses one of our valves manufactured in the 1920ies – and by the way, we can still deliver the spare parts.

LET US
TAKE A
CLOSER
LOOK.

**IF YOUR COMPANY IS DOING BUSINESS IN ONE OF THESE BRANCHES,
WE SHOULD TALK – AND WELCOME YOU AS A CLIENT.**

POWER INDUSTRY

When producing energy at high pressures and temperatures, valves are important components of the overall system. PRUSS products are efficient components that can be individually customised for your application in the power station sector. We have the right solution for every application.

STEEL INDUSTRY

The worldwide demand for metallurgical products requires a constant development of high-tech products for their production. PRUSS valves are an important component of the overall process.

PETROCHEMICAL INDUSTRY

Chemical products have a broad spectrum of features. PRUSS delivers product solutions for the production and processing of numerous special applications.

OIL- AND GAS INDUSTRY

The production, distribution and storage of oil and gas products requires a high level of safety. High-end valves from PRUSS for regulating and controlling liquid and gaseous flows play a role in this.
